

• Referrer & Referrals Analysis

Referrers Performance Dashboard

Problem Statement:

"The store has an organic referral program operating without any formal structure or tracking. The business does not know which age groups are most likely to refer customers, whether referred customers from different age groups convert and stay loyal at different rates, and whether the age of the referrer influences the quality of the referral they give. This analysis investigates referral behaviour across age segments to identify where the referral program is strongest and where it needs attention."
